

ABSTRACT

In the present invention, there is provided a laminated film that is excellent in terms of mechanical strength and low coefficient of thermal expansion.

5 According to the present invention, there is provided a laminated film, which is characterized in that it comprises a resin sheet having a cured resin layer containing glass cloth and a polarizing plate laminated on the resin sheet, in which any one of weft yarn and warp yarn of the glass cloth is oriented at an angle of 5 degrees or less relative to an absorption axis of the polarizing plate.
